Observations

[]	Species - Alpha Tax Cat	User notes
[]	Scarlet Tanager	greenish tanager with gray bill and white edge to tertials; eliminated western tanager because there was no obvious contrast of the green tones throughout the crown, nape, and back. Eliminated summer tanager because of shorter bill and smaller overall size. Plainish face and lack of eyeline eliminate hepatic and summer. No red at all evident on bird. combination of white edges on tertials, uniformly greenish back and gray bill are all consistent with an adult female scarlet tanager. seen well by Eric Z. and myself
