RESULTS: _____

COLORADO FIELD ORNITHOLOGISTS SIGHT RECORD FORM

(Please print or type. Attach photographs, drawings, and additional pages if necessary.)

Species: Blue-winged Warbler
(Common Name)Vermivora pinus
(Scientific Name)

Red 5/20/00 upl

Date(s) of observation: May 16, 2000Number of birds seen: 1 Sex: Male Plumage: AdultExact location: CSH 165 50 yards southeast of entrance to Meadow Creek SubdivisionCounty: Pueblo Nearest town: Colorado City Elevation: 6000 FeetLength of observation: 10 minutes Times(s) of observation: 9:20 - 9:30 AMOther observers who saw the bird(s) with you: NoneOther observers who independently saw the bird(s): NoneLight conditions (quality; direction relative to bird's; position): Good- bird north of observerOptical equipment used: 10x40 Zeiss binocularDistance from bird(s) (estimated unless otherwise noted): 10 yardsWas bird photographed?: No If so, have you submitted photographs? _____

Who took the photographs? _____

Describe the general and specific habitat in which the bird(s) occurred:

Bird was in small scrub oak grove near extensive willow-cattail marsh

Describe the bird's behavior (flying; feeding; habits; behaviors used in identifying the species or in supporting the identification):

Bird foraged fairly high in 30 foot scrub oak trees. Sluggish movements suggestive of vireo. The bird also gave its beee-bzzz song frequently.

Describe the bird(s) in detail. This is the most important part of this report. Include overall size and shape, and how you placed the bird(s) in the general group that you did. Give complete details of plumage, including head, throat, undersides, nape, back, wings, and tail. Give particular emphasis to marks you used to identify the bird. Describe other details, such as color and shape of bill, legs, eye, (etc.) that were important in making the identification. (Fill out this portion even if photographs are submitted; you may attach additional sheets, drawings, field sketches, or copy of field notes):

This bird was slightly smaller than Yellow-rumped Warblers. Its body was primarily bright lemon yellow shading into greenish yellow back & rump. Head solid lemon yellow with prominent black eye-line. Wings were slate-blue with 2 white wing bars. Tail was slate-blue and slightly notched. Undertail coverts were whitish. Eye was black. Bill was solid black and slightly down-curved. Legs were dark.

Describe bird's call or song:

Frequently repeated beee-bzzzz

Discuss similar species and how you eliminated them:

Prothonotary Warbler is more golden yellow, lacks white wing bars and black eye line. "Brewster's" hybrid shows more whitish underparts.

What is your prior experience with this and similarly appearing species?

I have seen a few Blue-winged Warblers in Colorado and many in my home state of Missouri. I have seen many Prothonotary Warblers.

List books, guides, recordings, or other sources consulted and how these influenced your identification (during and after observation):

This report was made from notes made during ✓ or after _____ observation, or later from memory _____.Date of written report: 5-16-00Reporting observer: David Silverman Signature: David A. SilvermanObserver's address: P.O. Box 362 Rye CO 81069
