

COLORADO FIELD ORNITHOLOGISTS' SIGHT RECORD REPORT
☒ RARE OR UNUSUAL RECORD ☐ NEW STATE RECORD

CFO-ORC FILE # 52-71-67

Accepted 9/25/74

Species: GOLDEN-WINGED WARBLER

Vermivora chrysoptera

(Vernacular Name)

(Scientific Name-use binomial)

Date(s): May 27, 1974

Time Bird Seen: 5:30pm

off and on (about 1 hour at 8:25 observation time)

Locality: Marshdale, 3 miles south of Evergreen

Nearest Town: Evergreen

County: T Jefferson

Other observers who identified this bird:

NAME	ADDRESS	TELEPHONE
<u>Edna Claire Thomas</u>	<u>Rt 2 Box 212A Evergreen, Colo 80439</u>	<u>674-5345</u>
<u>Bill + Sylvia Brackner</u>	<u>Rt 4 Box 140 Evergreen, Colo 80439</u>	<u>674-4851</u>
<u>Zane + Bill Stutz</u>	<u>Rt 2 Box 274-M Evergreen 80439</u>	<u>674-4479</u>

Optical Equipment: Tasco 7x35 Binoculars

Light Conditions: overcast, but light good, light generally at about a 90° to observer with bird at eye

Distance from Bird (how measured): 8 ft (pistol) to 30 ft

Number of Birds Seen: 1 Sex: Male Plumage: adult

Overall Appearance and Size: See 4'-4 1/2" larger than kinglet and smaller than rock's sparrow in area. Appeared typically like a warbler.

Detailed Description (describe only what was actually observed in the field):

Bill (shape and color): thin, not especially long, dark grayish color

Legs (shape and color): slender-dark

Crown and Forehead: bright yellow color

Eye (color): black

Nape: grayish

Face: white supercilious, black ear patch Throat: black with white line, separating throat from p.

Breast and Sides: white shading to gray

Belly and Flanks: white

Undertail Coverts: white

Back: smooth gray

Wings: broad yellow (bright) wing bar, a tinge of yellow extending into the secondaries

Underwings: not noticed

Rump: gray

Uppertail Coverts: gray

Upper Side of Tail: gray extreme outer tail feathers white, only one feather on each side white

Under Side of Tail: not noticed

Shape of Tail: basically square

Voice: not heard

Behavior: flitted around a great deal, apparently feeding, it remained in the lower half of the willow below 4 ft. Appeared ~~more~~ oblivious of people and would allow close approach.

Habitat: willow streamside surrounded by an open ponderosa forest

Prior Experience with this Species: Had previously seen it in Baca County, Colorado May 5/12 and May 12, 1974

How Were Similarly Appearing Species Eliminated? There are really no similar species. The black throat might suggest a chickadee but yellow crown and wing bar and black ear patch eliminate that and all other warblers with black patches that are similar have yellow underparts.
