## COLORADO FIELD ORNITHOLOGISTS SIGHT RECORD FORM

(Please print or type. Attach photographs, drawings, and additional pages if necessary.)

Rec'd 3/9/00 uplSpecies: Inca Dove Columbina inca  
(Common Name) (Scientific Name)Date(s) of observation: Feb. 27, 2000Number of birds seen: 2 Sex: ? Plumage: adultExact location: S.E. corner of intersection of Virginia & Washington Aves. in Rocky FordCounty: Otero Nearest town: \_\_\_\_\_ Elevation: 4150Length of observation: one minute Times(s) of observation: 7:30 A.M.Other observers who saw the bird(s) with you: noneOther observers who independently saw the bird(s): Feb 29 - Percival, Wood, Ditley & Kokuloff; Mar 5 - Janos, Olsen & QuisenberryLight conditions (quality; direction relative to bird's; position): Sunny - ~~from~~ from behind observerOptical equipment used: Celestron Regal 8x42 binocularsDistance from bird(s) (estimated unless otherwise noted): 50 ft.Was bird photographed?: NO If so, have you submitted photographs? \_\_\_\_\_

Who took the photographs? \_\_\_\_\_

Describe the general and specific habitat in which the bird(s) occurred:

both birds flew into a small ash tree, then flew south into alley in residential area

Describe the bird's behavior (flying; feeding; habits; behaviors used in identifying the species or in supporting the identification):

flew fairly rapidly and directDescribe the bird(s) in detail. This is the most important part of this report. Include overall size and shape, and how you placed the bird(s) in the general group that you did. Give complete details of plumage, including head, throat, undersides, nape, back, wings, and tail. Give particular emphasis to marks you used to identify the bird. Describe other details, such as color and shape of bill, legs, eye, (etc.) that were important in making the identification. (Fill out this portion even if photographs are submitted; you may attach additional sheets, drawings, field sketches, or copy of field notes): I saw one bird fly up into the tree about 15 ft off ground from about 50 yards away. I thought it was a solitaire. When I stopped to look at it with binoculars it had a dove head and was gray and was about the size of a solitaire. When a second bird flew into the tree I could see it had a brownish black tail with thin white edge that was squared off. Its back was gray with distinct black scalloped edges to feathers.Describe bird's call or song: Not heard

Discuss similar species and how you eliminated them:

Tail too long for ground-dove and was squared off, not pointed as in mourning dove.

What is your prior experience with this and similarly appearing species?

Seen in Phoenix, AZ 15 years ago

List books, guides, recordings, or other sources consulted and how these influenced your identification (during and after observation):

## COLORADO FIELD ORNITHOLOGISTS SIGHT RECORD FORM

Rcd 4/14/00 vpl  
(3 photos)

Results: \_\_\_\_\_

**Species:**

Inca Dove

Columbina inca

**Dates:** 3/5/00**Number of birds seen:** 2 or 3**Sex:** unknown**Plumage:** adult basic**Locality:** Hopkins street between Virginia and Lowel in Rocky Ford.**Elevation:** 4240 feet - determined by GPS.**Nearest town:** Rocky Ford**County:** Bent**Time observed:** around 10 am**Duration of observation:** several minutes**Other observers with you:** Mark Janos and Ric Olson.**Other observers who saw the bird independently:** many**Light conditions:** Clear and sunny. The sun was mostly behind me when I took the photos.**Optical equipment:** Leica 10x42 binoculars, photos taken with Canon A2E using a Sigma 400 APO Macro lens. The photos were blown up, cropped, and auto-equalized using Corel PhotoPaint, then printed.**Distance from bird:** I did not take any notes but I think the photographed one was about 20 feet away.**Describe the bird's behavior:** The birds were mostly perching in trees just above eye level and calling most of the time.**Describe the bird (what you actually saw):**

I took no notes but from the photos the following can be observed.

**Head, back, wings:** The scaly look is visible in the photos on pretty much the entire bird.**Tail:** The tail is long and narrow.**Bare parts:** A thin dark bill.**Underparts:** Not scaly, flecked with black.**Size:** Small like a sparrow. No direct comparisons with other birds were made.**Describe the bird's song and call if heard:** It gave the "no hope" call over and over.**Describe the habitat in which you observed the bird:** It was a residential area with lots of mature trees.

DWD

**How did you eliminate similarly appearing species:**

Common Ground-Dove: Does not have such a long tail or scaly back and sides.  
Lacks all black bill.

Ruddy Ground-Dove: Does not have such a long tail or scaly back and sides.  
Lacks all black bill.

Morning Dove. Is not scaly. Call was different.

**What is your prior experience with this and similarly appearing species:** Of course I have seen many Mourning Doves. In California I had a Common Ground-Dove at my bird feeder for several days. I observed it for hours and took several photographs. At the time it was one of the northernmost Common Ground-Doves that had been found in California. I have also seen many Common Ground-Doves in Arizona, Florida, and the Salton Sea - plus Colorado. I have seen many Inca Doves in Arizona and the Salton Sea. I have never seen a Ruddy Ground-Dove.

**List books if they helped in your identification:** A Field Guide to North American Birds, second edition, by National Geographic Society.

This report was written from notes taken during \_\_\_, or after observation \_\_\_ or from memory\_\_x\_ and from photos.
