CFO-RC FILE X:

RESULTS:

Species: (Common Name) Inca Dove (Scientific Name) Columbina inca

Date(s) of occurrence: March 5, 2000

Number of birds seen: TWO **Sex:** Probable male and female **Plumage:**

Exact location: 1100 Hopkins (between Virginia and Lowell)

County: Nearest town: Rocky Ford **Elevation:** 4500? feet

Length of observation: 25 minutes **Time(s) of observation:** 09:30 - 10:05 am

Other observers who saw the bird(s) with you: Marc Janos and Dave Quesenberry

Other Observers who independently saw the bird(s):

Light Conditions (quality; direction relative to bird(s); position: Sunny ,
winds light and variable, temp in the mid 50's; birds in various positions.

Optical equipment used: Ziess 10 X 40

Distance from bird(s) (estimated unless otherwise noted): 20 to 75 feet

Was bird(s) photographed? Yes **If so, have you submitted photos?** NO

Who took the photographs? Dave Quesenberry

Describe the general and specific habitat in which the bird(s) occurred:

Suburban Landscape (leafless deciduous trees and junipers)

Describe the bird's behavior (flying, feeding, habits, behaviors used in

identifying the Species or in supporting the identification): The birds were seen sitting and walking on major branches of deciduous trees and junipers on and near 1100 Hopkins in Rocky Ford. They were calling to each other about 95% of the observation time.

Describe the bird in detail. This is the most important part of this report. Include the overall size and shape and how you placed the bird in the general group that you did.

Give complete details of plumage, including head, throat, undersides, nape, back, wings and tail. Give particular emphasis to marks you used to identify the bird(s). Describe other important details, such as color and shape of bill, legs, eye, (etc.) that were important in making the identification. (Fill out this portion even if photographs are submitted; you may attach additional sheets, drawings, field sketches or copy field

notes): The birds were a small (about Canyon Towhee size), gray, gray - brown doves with a slender black bill slightly decurved at the tip. The eyes appeared dark and large for the head size. The legs were very short, the color was not observed. The birds feathers were overall a gray, gray - brown color, slightly darker dorsally than ventral, with dark terminal borders giving the birds a scaly or scalloped look. The tail appeared long for the body and had white outer retricies, dark middle retricies and gray, gray - brown central retricies. The corners appeared rounded in flight. The wing in flight showed rust colored primaries both from above and below.

Describe bird's call or song: A repetitive 'No Hope'

Discuss similar species and how you eliminated them: Both the Mourning Dove and the Eurasian Collared Dove were eliminated the rust colored primaries, the tail pattern and the size. Common Ground Dove was eliminated by the tail pattern.

What is your prior experience with this and similarly appearing species? I have seen a few in Az.

List books, guides, recordings or other sources consulted and how this influenced your identification (during and after observation): Nat. Geo. 3rd Ed.

This report is from notes made during X (taped) or after X (taped) observation or later from memory

Date of written report: March 10, 2000
