2000 - 127

COLORADO FIELD ORNITHOLOGISTS SIGHT RECORD FORM

(Please print or type. Attach photographs, drawings, and additional pages if necessary.)

Species : Black burnian Warbler Dendroica Fusca *Red 10/27/00 wpe*
(Common Name) (Scientific Name)

Date(s) of observation : 10-18-2000

Number of birds seen : 1 Sex : Male Plumage : Immature

Exact location: East end of Greenhorn Meadows Park at Greenhorn Creek

County : Pueblo Nearest town : Colorado City Elevation : 6000 Feet

Length of observation : 20 minutes Times(s) of observation : 9:30 - 945 AM + 11:40 - 1145 AM

Other observers who saw the bird(s) with you: None

Other observers who independently saw the bird(s) : None

Light conditions (quality; direction relative to bird's; position) : Bird was southwest of observer

Optical equipment used : Zeiss 10-40 Binocular

Distance from bird(s) (estimated unless otherwise noted) : 20 Feet

Was bird photographed?: No If so, have you submitted photographs? _____

Who took the photographs? _____

Describe the general and specific habitat in which the bird(s) occurred :

Riparian creek habitat of mixed cottonwood, willow, and oak

Describe the bird's behavior (flying; feeding; habits; behaviors used in identifying the species or in supporting the identification) :

Bird leisurely foraged in patch of Tall willows but stayed in lower half of trees.

Describe the bird(s) in detail. This is the most important part of this report. Include overall size and shape, and how you placed the bird(s) in the general group that you did. Give complete details of plumage, including head, throat, undersides, nape, back, wings, and tail. Give particular emphasis to marks you used to identify the bird. Describe other details, such as color and shape of bill, legs, eye, (etc.) that were important in making the identification. (Fill out this portion even if photographs are submitted; you may attach additional sheets, drawings, field sketches, or copy of field notes) :

See Reverse

Describe bird's call or song:

None given

Discuss similar species and how you eliminated them :

See Reverse

What is your prior experience with this and similarly appearing species?

I have seen many Blackburnian Warblers in midwestern states and a few in Colorado. I have seen many Townsend's Warblers in Colorado & Pacific Northwest.

List books, guides, recordings, or other sources consulted and how these influenced your identification (during and after observation) :

Dunn & Garrett, Field Guide to Warblers of North America

This report was made from notes made during ✓ or after _____ observation, or later from memory _____

Date of written report : 10-19-2000

Reporting observer : David Silverman Signature : David Silverman

Observer's address: P.O. Box 362 Rye CO 81069

Send report to : Bill Lisowsky, 2919 Silverplume Drive, Fort Collins, Colorado 80526

Description: This bird was smaller than nearby Yellow-rumped Warblers. Crown was olive green, becoming paler toward forehead. Face was yellow with olive green auricular patch forming yellow supercilium between green patch and crown.

Yellow on face merged with yellow throat and breast. Lower belly and undertail coverts were white excepting pale yellow wash between legs and vent. Flanks were speckled with black marks.

Back was boldly streaked with alternating dark and light olive green streaks. A buffy white stripe flanked each side of the back. — the diagnostic "braces" of Blackburnian Warbler.

Wings were dark with each one having two wing bars. Upper tail was dark becoming lighter toward outer rectrices. Undertail was white.

Bill was short, slim, black, and slightly down curved. I could not see or failed to notice lighter lower mandible. Legs and feet were dark but toes showed flesh tones in sunlight.

Similar species: Townsend's Warblers lack bold back streaking and buffy white braces of Blackburnian Warblers.

Most Townsend's Warblers lack yellow in area of vent. More rounded auricular patch of Townsend's gives it a different facial expression than Blackburnian Warbler which has a more triangular patch.
