

☒ RARE OR UNUSUAL RECORD ☐ NEW STATE RECORD

Accepted YK 4/26/74

Species: Carolina Wren

(Vernacular Name)

Thryothorus ludovicianus

(Scientific Name-use binomial)

Date(s): Sept. 27, 1974

Time Bird Seen: 5:00 to 5:10

Locality: CU campus

Nearest Town: Boulder

County: Boulder

Other observers who identified this bird:

NAME

ADDRESS

TELEPHONE

Steve Larson

2955 Glenwood Dr #214 Boulder 80302

Optical Equipment: Nikon binoculars 8x30 8.5°

Light Conditions: fair

Distance from Bird (how measured): 8' estimate

Number of Birds Seen: 1 Sex: — Plumage:

Overall Appearance and Size: small, restless brown bird with tail held up at angle - @ 4 1/2" long

Detailed Description (describe only what was actually observed in the field):

Bill (shape and color): thin, pointed

Legs (shape and color):

Crown and Forehead: dark brown

Eye (color): dark

Nape: dark brown

Face: prominent white eye stripe

Throat: white

Breast and Sides: buff

Belly and Flanks: buff

Undertail Coverts: striped barred

Back: brown

Wings: brown with barring

Underwings:

Rump: brown

Uppertail Coverts: brown

Upper Side of Tail: brown with barring

Under Side of Tail: dark with barring

Shape of Tail: narrow, narrowing towards tip, rounded

Voice: heard one dry, loud chip

Behavior: restless movements through brush

Habitat: brushy deciduous (area: mixed deciduous - conifer)

Prior Experience with this Species: Observed in Florida

How Were 'Similarly Appearing Species Eliminated? Prominent white eye stripe eliminated other wrens except Bewick's. buffy underparts and lack of white on tail eliminated Bewick's Wren. Lack of streaking on back and habitat, plus buffy underparts, eliminated near long-billed Marsh Wren.

VERIFYING DOCUMENTATION OF AN UNUSUAL RECORD

1. Species: Carolina Wren | Thryothorus ludovicianus 2. Number: _____
 (Vernacular Name) (Scientific Name)
3. Location: Boulder Creek near CU campus
4. Date(s): Sept 29 5. Time bird seen: 0920 to 0925
6. Description of size, shape and color-pattern. (Describe in great detail all parts of the plumage including beak and feet coloration in addition to the diagnostic characteristics; however, include only what actually was seen in the field):
 Obvious wren. Noted immediately brownish-red (buffy) underparts, white throat and very pronounced white eye stripe. No white on tail. Typical wren behavior + habitat. Located by notes. Was giving a wren-like rattle - rather evenly spaced notes, not musical, but not recognizable as house wren. Bird is (see Bent) very versatile vocalizer.
7. Description of voice, if heard: ↑
8. Description of behavior: Skulking in heavy brush + along tree trunks
9. Habitat--general: riparian streamside
 specific: brush + dense undergrowth
10. Similarly appearing species which are eliminated 6, 7 and 8 above; Explain:
No white on tail + buffy underparts eliminated Bewicks. Too large for Marsh wren.
11. Distance (how measured?): estimated 20 feet.
12. Optical equipment: 7x35
13. Light (sky, light on bird, position of sun in relation to bird and observer):
sky clear, bright sun - sun to quarter + back.
14. Previous experience with this species and similarly appearing species:
Familiar with species in Penna. + east in general
15. What made you think this species was unusual or rare?
— (didn't know species was on report list until today)
16. Other observers:
none
17. Did others agree with your identification?
—
18. Other observers who independently identified this bird:
Steve Larson found bird previous week
19. Books, illustrations and advice consulted and how did these influence this documentation:
none
20. If bird was photographed, please attach pictures and describe equipment used:
Paul R. Julian Paul R. Julian Street Address: 1269 Chinook way

COLORADO FIELD ORNITHOLOGISTS SIGHT RECORD REPORT

☐ RARE OR UNUSUAL RECORD ☐ NEW STATE RECORD

CFO-ORC FILE # 112-71-120

accepted for 11/26/74

Species: CAROLINA WREN
(Vernacular Name)

Thryothorus ludovicianus
(Scientific Name-use binomial)

Date(s): 5, 7, & 13 Oct 74 Time Bird Seen: 8AM, 12N, 3:15 to 4:00PM (5th)
Locality: Boulder Creek, among brush piles in deciduous woodland, below Folsom
Nearest Town: Boulder County: Boulder Stadium

Other observers who identified this bird:

NAME	ADDRESS	TELEPHONE
Steve Larson		
Bayard Cobb	903 Pine St, Boulder	444-1673

Optical Equipment: 7x50 Tasco, 10x40 Leitz

Light Conditions: sunny, overcast

Distance from Bird (how measured): minimum distance: about two feet

Number of Birds Seen: 1 Sex: ? Plumage: ----

Overall Appearance and Size: small, dark rufous Brown ~~maxilla~~ above, buff below
cocked tail. obviously a wren

Detailed Description (describe only what was actually observed in the field):

Bill (shape and color): long and acute, horn color

Legs (shape and color): -----

Crown and Forehead: rich dark brownish rufous Eye (color): -----

Nape: rich dark brownish ruf. Face: white, brn eyeline Throat: white

Breast and Sides: buff white superciliary

Belly and Flanks: buff

Undertail Coverts: white, banded closely with brown

Back: rich dark brownish rufous

Wings: same as back, primaries dark brown banded with black or dark brown

Underwings: -----

Rump: same as back Uppertail Coverts: same as back

Upper Side of Tail: same as back, banded with dark brown or black.

Under Side of Tail: -----

Shape of Tail: short, narrow

Voice: gave scold notes, no song

Behavior: ~~skulked~~ skulked in brush, hopped up & down on perch (low), preened

Habitat: deciduous woodland with good shrub and brush cover=ideal for the sp.

Prior Experience with this Species: 10 yr experience with the sp. living in S.C.

It nested in my yard, etc.

How Were Similarly Appearing Species Eliminated? Bewick's: buff breast and no white
tail spots

Canyon: buff breast, white superciliary, color not so rich (chestnut)

Rock: buff breast, no lines on breast, no buff spots on tail

all others too discrepant in size

a report form was filled out on the spot, at first observation.
