COLORADO FIELD ORNITHOLOGISTS - SIGHT RECORD FORM

NEW STATE RECORD ☐UNUSUAL RECORD ☒

Rcd 12/28/00 wpl

Please print or type. Attach photographs and additional pages if necessary.

Species: Philadelphia Vireo | Vireo philadelphicus
(Vernacular Name) (Scientific Name)Date(s): 17 September 2000Number of birds seen: 1 Sex: ? Plumage: adult?Locality: Lamar Community College Woods Elevation: 3620'Nearest town: Lamar County: ProversTime(s) observed: Late morning? 10 AM?Duration of observation (e.g. 1 sec., 5 min., etc.): 10 minutes

Other observers who saw the bird with you (give names, addresses, telephone numbers):

Brandon Pescirol
Rick Olson

Other observers who saw the bird independently (give names, addresses, telephone numbers)

don't knowLight conditions (position of bird to light and shade, direction and strength of light):
variousOptical equipment used (e.g. power, types): 8x42 B&L 2litesDistance, and how measured: 10' at the closest

If photographed, type of equipment and film: _____

Who else photographed the bird? _____

Describe the bird's behavior (e.g. flying, feeding, or habits used in identifying):

Actively foraging in Virginia Creeper vines, mostly on cottonwood trunks. Presumably eating the V. creeper berries (as vireos are wont to do) and/or insects flushed from the vines.

Describe in detail the bird's relative size, overall shape, plumage and color pattern. Include details of bill, wing and tail shape. Give particular emphasis to marks you used to identify the bird. Reference to its resemblance to field guide descriptions and illustrations is not enough. Describe only what you actually observe in the field:

Small, plump passerine. Fairly active, short-tailed, generally light brownish-gray. Vireo-shaped bill (thicker than warbler or kinglet). Strong white eyebrow (supercilium). Dark gray crown/cap (similar in shade to Red-eyed Vireo). Darkish lore area. Black eye. Underparts light gray-yellow, brightest on the upper breast. Throat & belly palest. Undertail coverts yellow, but not quite as bright as the upper breast. No apparent wing bars. Nape, back & upper tail greenish-gray. Legs? Bill blackish-gray.

Description (continued):

Describe the bird's song and call, if given, including method of delivery, (i.e. from perch, in flight, duration):

Describe the general and specific habitat in which you observed the bird:

Riparian woodland @ many exotic species

How did you eliminate similarly appearing species?

Love area (dark), short tail, and yellowish upper breast not correct for Warbling Vireo. Lack of wing bars not correct for Bell's Vireo. Too small, active & yellow for Red-eyed Vireo plus eye black.

What is your prior experience with this and similarly appearing species?

3rd one in CO. Several seen in Ohio & TX, incl. this past spring. Have seen several to 100's of the other species.

List books, illustrations, recordings, other birders, etc. consulted and how this influenced your identification:

a) at time of observation: _____

b) after observation: _____ Nat'l Geo & Sibley

This report was written from reports made during _____, after observation X from memory X
Date and time report was written: 9 Dec 2000

Reporting observer: David Leatherman Signature: David Leatherman
