COLORADO FIELD ORNITHOLOGISTS - SIGHT RECORD FORM

NEW STATE RECORD ☐UNUSUAL RECORD ☒

Red 12/28/00 upc

Please print or type. Attach photographs and additional pages if necessary.

Species: Philadelphia Vireo | Vireo philadelphicus
(Vernacular Name) (Scientific Name)Date(s): 6 October 2000Number of birds seen: 1 Sex: ? Plumage: Adult?Locality: Poudre River Trail north of Prospect Rd. Elevation: 5000Nearest town: Fort Collins County: LarimerTime(s) observed: Late afternoonDuration of observation (e.g. 1 sec., 5 min., etc.): 15 minutes

Other observers who saw the bird with you (give names, addresses, telephone numbers):

Joe Mannosier (on 7 October 2000)

Other observers who saw the bird independently (give names, addresses, telephone numbers)

Rachel Kolokoff, Joe Roller, John Vanderpoel (Oct 7)

Light conditions (position of bird to light and shade, direction and strength of light):

variousOptical equipment used (e.g. power, types): 8x42 B&L ZeissDistance, and how measured: 20-25' closestIf photographed, type of equipment and film: —Who else photographed the bird? —

Describe the bird's behavior (e.g. flying, feeding, or habits used in identifying):

Foraging in large crack willows on aphids with orange-crowned warblers, yellow-rumped warblers plus warbling vireo, mountain black-capped chickadees, ruby-cr. kinglet and brown creepers. (large mixed flock)

Describe in detail the bird's relative size, overall shape, plumage and color pattern. Include details of bill, wing and tail shape. Give particular emphasis to marks you used to identify the bird. Reference to its resemblance to field guide descriptions and illustrations is not enough. Describe only what you actually observe in the field:

Small, light-colored, "fidgety" passerine. Modest eyebrow line (pale). Grayish cap. Pale below. Yellowish in center of breast and on undertail coverts. Throat very light yellow-white (contrast in shade with upper breast). No wing bars. Tail short. Back greenish gray. Eye dark. Legs & bill dark. Lores somewhat dark but not black.

Description (continued):

Describe the bird's song and call, if given, including method of delivery, (i.e. from perch, in flight, duration):

Describe the general and specific habitat in which you observed the bird:

Riparian woodland dominated by cottonwoods and large willows.

How did you eliminate similarly appearing species?

More active than nearby warbling vireo. Grayish cap, bright yellow oval area in middle of breast (gave breast a "warm" glow) + yellow undertail. Coverts somewhat brighter than I have ever seen on warbling vireo. No wing bars not like Bell's. Bill thicker than kinglet or warbler.

What is your prior experience with this and similarly appearing species?

4th in CO. Several seen in TX & Ohio. Several others to several dozen seen of other species.

List books, illustrations, recordings, other birders, etc. consulted and how this influenced your identification:

a) at time of observation:

b) after observation: Nat'l. Geo
